The Underlying Fund may also invest in money market instruments on an ancillary basis. - The Underlying Fund invests at least 50% of its assets in securities of issuers with favourable environmental, social and governance (ESG) characteristics. - The Underlying Fund may invest in the following assets according to the percentages indicated: - hybrids and contingent convertible (CoCo) bonds: less than 30%, with CoCos less than 20%. - The Underlying Fund may invest in other subordinated financial debt and preference shares. - The Underlying Fund's exposure to distressed securities is limited to 10% of its assets. - The Underlying Fund may use derivatives for hedging, efficient portfolio management and investment purposes. KEY RISKS	
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? The value of the ILP sub-fund may rise or fall. The following key risk factors may cause you to lose some or all of your investment:	Refer to "Risk Factors" section of the Underlying Fund's Prospectus for further information on the Risk Factors of sub-fund.
Market and Credit Risks	
You are exposed to credit risk.	

• A bond or money market instrument could fall in price, and become more volatile and less liquid, if the credit quality of the issuer or the security declines. In extreme cases, a debt investment could go into default. You are exposed to emerging markets risk. • Emerging markets are less established, and more volatile, than developed markets. They involve higher risks, particularly market, credit, illiquid security, legal, custody, valuation and currency risks. You are exposed to market risk. • Prices and yields of securities can change frequently with significant volatility based on a wide variety of factors, such as political and economic news, government policy and climate patterns. You are exposed to Russia risk. • In Russia, risks associated with custody and counterparties are higher than in developed countries.	
Liquidity Risks	
The ILP sub-fund is not listed on the Singapore Exchange and you can redeem only on Business Days through Singapore Life Ltd. In respect of Singapore investors, there is no secondary market for the ILP sub-fund.	
Product-Specific Risks	
You are exposed to CoCo bonds risk. • Contingent convertible securities are comparatively untested, more vulnerable to losses than equities, carry extension risk, can be highly volatile, and their issuers can cancel or modify scheduled income payments at will. You are exposed to convertible securities risk. • Convertible securities carry both equity risk and the credit and default risks typical of bonds. You are exposed to counterparty and collateral risk. • A counterparty could be unwilling or unable to meet its obligations to the Underlying Fund. The value of collateral might not cover the full value of a transaction, or any fees or returns owed to the Underlying Fund. You are exposed to currency risk. • Any changes in currency exchange rates could significantly reduce investment gains or income, or increase investment losses. You are exposed to derivatives risk. • The value of derivatives can be volatile. Small movements in an underlying asset's value can create large changes in the derivative's value and expose the Underlying Fund to losses that could be greater than the cost of the derivative itself. You are exposed to distressed securities risk. • Distressed securities involve significant risk. They are highly volatile and may not yield an attractive return. You are exposed to hedging risk. • Hedging may not work as intended and involves costs, which reduce investment performance. You are exposed to high yield risk. • High yield securities are speculative. Compared to investment grade bonds, such securities are more volatile, more sensitive to economic events, less liquid and carry greater default risk. You are exposed to interest rate risk. • When interest rates rise, bond values generally fall. This risk is greater the longer a bond investment's duration.	

You are exposed to investment fund risk.

- Investing in an Underlying Fund involves certain risks an investor would not face if investing in markets directly, such as large outflows, valuation error and investment limitations.

You are exposed to operational risk.

- The Underlying Fund could suffer losses due to errors, service disruptions or other failures, fraud, corruption, cyber crime, instability, terrorism or other irregular events.

You are exposed to sustainable investing risk.

- The Underlying Fund may underperform the market or other funds that do not apply sustainability criteria.
